

UN Common Country Analysis
for the Cooperation Framework and the 2030 Agenda

Kazakhstan
September 2019

Executive Summary

2019 was a year of political transition and conditions are in place for continuing stability in the country. Since independence, Kazakhstan was led by President Nazarbayev who stepped down in early 2019 to make way for presidential elections in accordance with the constitution. Kassym-Jomart Tokayev, who came from the same party as First President Nazarbayev, was elected as President in June 2019. While the new leadership is committed to the overarching goal of sustaining socio-political stability, it also acknowledged the need to comprehensively respond to the rising economic and social disparities among people in Kazakhstan, focusing more on raising living standards, overcoming inequalities, and strengthening civil society to complement the traditional prioritization of growth and social expenditure. Going forward, this approach will be tested: on the one hand, the mounting development challenges of Kazakhstan indeed require more radical and urgent responses and, on the other hand, the changing landscape of the region, with neighboring countries competing for transformation, is influencing people and the Government's expectations about the desirability and achievability of reforms.

Kazakhstan's economy has recovered from the crisis caused by low oil prices although it continues to depend on fossil fuels. For the next several years, economic growth is expected to remain flat (at around 3.2%), which might narrow the fiscal space to increase social expenditure. Despite a Gini coefficient at 27.5, social cohesion in the country shows signs of strain. Regional inequality is high. This document identifies location, access to services, gender, income and household composition, age, disability and gender identity as determinants of vulnerability. During the years of economic growth, the government was able to respond to social challenges by increasing expenditure and achieved positive results in education and maternal and infant mortality. The country will need to use a more sophisticated policy mix to ensure that 'nobody is left behind' in the future.

Kazakhstan sees itself as an important regional player, the richest country in the Central Asia region and the biggest by territory. It has become a destination country for migrants from neighboring Central Asian countries. Regional and sub-regional issues, such as water management and development and openness of trade routes are likely to play an important role for the future development of Kazakhstan.

Kazakhstan is one of the biggest emitters of CO₂ and, at the same time, needs to adapt to climate change, especially with regards to agriculture, as it remains the important supplier of grains, oilseeds and legumes in the region and has an ambitious livestock development program. Kazakhstan is a flood-prone country, exposed to extreme temperatures, and impacted by glacier melting.

The Government of Kazakhstan is committed to the Sustainable Development Goals agenda. 79.9% of the Goals are reflected in the existing strategic documents and programs. The Government has created a high-level institutional mechanism to oversee the implementation of SDGs. The process of nationalization of SDGs is under way, along with the work on indicators and monitoring mechanisms. The multifaceted agenda of SDGs is well-suited for the challenges of Kazakhstan and is likely to assist the country to reach its development goals.

1. Country Context

1.1 Political Situation and Governance

After Kazakhstan gained independence in 1991, President Nazarbayev promised to dismantle the clearly obsolete institutions of Soviet power and implement democratic governance, modern political institutions, and a market economy. In 1993, the government enacted a new constitution, proclaiming Kazakhstan a ‘democratic, secular, rule of law and social state’, with power divided between the executive, the legislature and the judiciary¹. While the Constitution promoted balance between the three branches of government, the State was led by the President with a strong executive branch. The slogan "economy first, then politics" was successfully followed to maintain this balance helped by high crude oil prices. However, their plunge in 2014-2016 made Kazakhstan introduce an integrated reform package that ranged from governance to economic, and which was eventually accompanied by Constitutional amendments that purported to strengthen democracy by offering a more rigid and precise separation of powers and formally diminishing the President’s role. The amendments increased the powers of the legislative branch, transferring responsibilities, for example, relating to socio-economic policies from the President to the Prime Minister and Parliament, and making the Prime Minister answerable to the Parliament.

2019 was a year of a managed political transition in Kazakhstan. On March 19, in a televised address to the nation, President Nazarbayev announced his resignation, with immediate effect². The Senate Speaker, Kassym-Jomart Tokayev became the acting Head of State. The elections were brought forward from 2020 and conducted on 9 June 2019. The process was dominated by the ruling Nur Otan party, although there were seven candidates, including for the first time, a woman. According to the Statement of Preliminary Observations and Conclusions by the OSCE International Election Observation mission, the elections “were efficiently organized and election day proceedings were orderly. However, significant irregularities were observed on election day, including cases of ballot box stuffing, and a disregard of counting procedures meant that an honest count could not be guaranteed”³. A number of peaceful protesters were detained on election day.

Overall, the political transition is not likely to lead to a drastic change of course. The Government shows signs that the public discontent⁴ was heard – on 17 July, the new President established a Council of National Trust⁵ with the declared purpose of assessing the draft state programs and legislation, discussing strategic challenges, ensuring constructive dialogue with civil society and non-government organizations; on 2 September, when speaking in Parliament, he called for easing of restrictions on peaceful demonstrations⁶.

⁶ <https://www.ndtv.com/world-news/kazakhstan-president-moves-to-allow-peaceful-protests-2094405>

Earlier in March 2017 a reform of the country's Constitution was enacted. The reform moved some of the powers of the President to the Government, especially in relation to socio-economic issues. Presidential orders will not have the force of law anymore. At the same time, the President appoints regional local governors (akims) in consultation with local parliaments (maslikhats) and will not consult the Government. The powers of the Parliament increased, and the Prime Minister should now report both to the Parliament and to the President⁷. Some had observed such reforms as an indication of preparation for the eventual departure of First President Nazarbayev⁸. However, to become effective, these on-paper reforms must be backed up with real-world changes, including the election of a pluralistic parliament that will use its powers to hold the government to account. New President Tokayev recognizes this: in his first State-of-the-Nation address he used the phrase 'a strong President – an influential parliament – an accountable government', which he acknowledged is 'not a fait accompli, but a goal towards which we must move at an accelerated pace'⁹. He also pledged a 'political transformation', albeit a gradual one, because 'successful economic reforms are no longer possible without the modernization of the country's socio-political life'. He cited developing a multi-party system, political competition and pluralism of opinion as aims that will serve the long-term stability of the system. Clearly, decision-makers recognize the need for reform, but there is a risk that cautious top-down measures could fail to respond adequately to citizens' demands for accountability and participation during this transition period.

Kazakhstan continues its efforts to improve governance. An Open Government Portal (<https://open.egov.kz/>) provides access to government services as well as information, on budgets of various agencies. In 2018 Kazakhstan was ranked 39th in the United Nations E-Government Survey. Kazakhstan's E-Gov online service provided 30 million Government services in 2018, while the number of registered users exceeded 8.5 million people. Half of the 165 Government services provided exclusively online are licenses, and permits including subsidy permits. The Government is planning to add another 140 services online¹⁰. About 76.4% of the population have access to the internet.¹¹ By 2021, it is planned to provide high-speed internet access to 3,718 state bodies and state-financed organizations located in 1,250 rural localities where more than 2.4 million people live. The total length of the FOC will be more than 20,000 km. By the end of 2021, more than 3,000 (3,166) settlements in rural areas could be covered with LTE network with a connection speed of at least 3 Mbps.¹²

The Anti-Corruption Agency reports a 16% decrease in the registered cases of corruption between 2016 and 2018 and names the following main instruments to prevent corruption: transparent and accountable state, professional civil service, client-orientation and automation of government services.¹³ Transparency International in its annual Corruption Perception Index ranks Kazakhstan as 124 out of 180 countries (score 31/100).¹⁴ In addition, some indicators of the World Governance Index (see Table 1), such as

government effectiveness, rule of law and regulatory quality show improvements, although voice and accountability appear challenging.

Table 1 World Governance Indicators for Kazakhstan

In 2018 the country moved to a ‘career’ model of civil service, which is expected to increase the motivation of civil servants. Competency-based selection of employees was also introduced. As a result of this reform more people have the opportunity to be promoted from within the rank and file¹⁵.

Independence of the judiciary has been a concern in Kazakhstan. The on-going judicial reform aims at increasing judicial authority; modernizing the recruitment process and career development of judges; improving the evaluation system of judges; and increasing the legal literacy of citizens. The government’s ‘100 concrete steps’ program issued by the First President in 2015, which promotes institutional reforms, includes positive measures to increase judicial accountability. New President Tokayev has promised to uphold the right to justice¹⁶. Genuine safeguards of judicial independence are not yet fully in place, and the judiciary’s ability to act as a check and balance on other branches of State power needs to be consolidated.

City mayors and regional governors are Presidential appointees. In general, regarding elections during the recent Universal Periodic Review (Nov-19), the leading Western European countries expressed a wish that Kazakhstan should “ensure the democratic process, especially by holding free, fair and transparent elections” (France); “remove existing restrictions on free and democratic elections with a focus on implementing the recommendations of the Office for Democratic Institutions and Human Rights” (Germany); and “accept the recommendations of the Organization for Security and Cooperation in Europe on the electoral system in preparation for the next parliamentary elections” (United Kingdom of Great Britain and Northern Ireland)¹⁷

Political representation of women is still low. As a result of the 2016 elections, women attained 27% of the seats in the lower house of the bicameral Parliament (the Majhilis) and 10.6% of the seats in the Senate. Within oblast-level elected assemblies (maslikhats), women made up only 12% of all deputies in 2014, with figures ranging from a high of 35% in Mangistau oblast to a low of 2% in East Kazakhstan oblast. Representation is somewhat higher in local elected bodies, with women representing 21% of all municipal deputies and 19% of district deputies. The Government of Kazakhstan has succeeded in increasing women’s representation in the judiciary. Women make up 54.8% of judges at the district, regional, and

¹⁷ <https://www.ohchr.org/EN/HRBodies/UPR/Pages/KZIndex.aspx>

municipal courts and 36.4% of the Supreme Court judges (footnote 29). Over 70% of employees of the Judicial Department are women. Although women hold more than one-third of all leadership positions in the central and territorial bodies of judicial administration, only 8.5% of the top court positions of president and chair of the judicial board are held by women¹⁸. The UN Human Rights Body, the Committee on the Elimination of Discrimination against Women (CEDAW), concluded in its observations on the fifth periodic report of Kazakhstan 2019¹⁹ that the Government should consider introducing “temporary special measures” and “gender quotas” to accelerate progress on equal representation of women in decision-making, as promised in the Government’s new draft law “On Family and Gender Policy”.

1.2 Human Rights

Kazakhstan is a party to most of the main human rights mechanisms (more details in section 1.5) and has moved forward in tackling some of the economic and social consequences of the global economic crisis. There is still much space for improvement, specifically, but not exclusively, in the fields of political and civil rights. Kazakhstan's rather strict legislation with excessive regulation of freedom of speech, freedom of peaceful assembly and freedom of association, including political parties, NGOs, religious organizations and labor unions, has been the subject of multiple recommendations from the UN Human Rights Council and UN human rights treaty bodies. Torture is reported to be endemic to the prison system and other detention facilities, including police stations, although the National Preventive Mechanism, established under UN OPCAT demonstrates potential to address the issue. Prejudices based on gender, gender identity and sexual orientation remain unaddressed by the State. Human rights defenders and activists face legal persecution and report about the authorities' lack of willingness to investigate the cases of crimes committed against them. Grievances about the lack of access to political participation led to an unprecedented wave of peaceful protests across the country, culminating in 2019.

The human rights of the LGBTQ community in Kazakhstan are limited. The LGBTQ community faces social and legal challenges, violence and discrimination. It is reflected in homophobic attitudes, hateful treatment and the failure of the police and government agencies to protect LGBTQ people. Recent cases of violence towards a transgender woman in prison showed intolerance and discrimination.²⁰ The Committee on the Elimination of Discrimination against Women’s (CEDAW) concluding observations on the fifth periodic report of Kazakhstan 2019²¹ expressed concern about the overall limited cooperation of the State party with civil society (CSOs) and cases of registration being denied to feminist organizations promoting women’s human rights and the rights of lesbian, bisexual, transgender and intersex (LGBTI) persons. The Committee recommended that the Government enhance cooperation with CSOs and review the law “on charities” to remove restrictions on registration of CSOs.

Freedom of speech is defined as the right guaranteed by the constitution of the Republic of Kazakhstan to freely search, receive, transmit, produce and disseminate information in any legal way. 3,520 mass media outlets are registered in Kazakhstan²², of which 2,886 are periodicals, 157 are television channels, 72 are radio, 405 are information agencies and online publications. Freedom of expression and freedom of the press are hampered by self-censorship of the media. Criminal liability for libel and insult against public

officials exist. The Government commonly applies measures to strengthen monitoring systems and restrict websites that are perceived to conduct harmful activities.

1.3 Economic Outlook

Kazakhstan's economic growth has slowed down since the peak of 2000-2007. After a sharp drop in 2015 (1.2%) and 2016 (1.1%), following the decrease in oil prices, the economy recovered slowly, with growth reaching 4.1% in 2017 and in 2018²³. Growth is expected to slow down slightly in 2019-2020 (to 3.2%) and average about 3.9% in the years 2021-2024 (see Table 2).

Table 2 Selected Economic Indicators 2018-2024

| Economic Indicator | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 |
|--|-----------|-----------|-----------|-----------|------------|------------|------------|

Source: International Monetary Fund, World Economic Outlook Database, April 2019

Some of the reasons for this include slow productivity growth and market dominance by state-owned enterprises, continued dependence on oil exports, as well as decelerating economic growth in Kazakhstan's main trading partners - particularly China, the European Union, and the Russian Federation²⁴. Volatility in Russian financial markets caused by international sanctions is also a cause for concern. FDI inflows in the country constitute 3.8 bn USD in 2018²⁵. The dependence of Kazakhstan's economy on extractive industry remains high. Crude oil and natural gas production accounts for almost 45% of the manufacturing industry. The share of crude oil and gas in the country's total exports is 67%²⁶. Oil output reached a record 90.3m tons in 2018, owing to an increase in production from the Kashagan oilfield.²⁷

It is noteworthy that in 2018, agriculture contributed only about 4% of GDP (see Figure 1), while 42.12% of the population lives in rural areas.²⁸ This points to structural inequalities in economic performance.

Another sign of inequality (regional) is the rate of growth in different regions of Kazakhstan, ranging from 12.5% growth in the oil-dominated Atyrau oblast to 4.7% growth in Karaganda oblast to contraction by 2.3% in Kyzylorda oblast.²⁹

Figure 1 GDP Composition in 2018

Source: Ministry of the National Economy of Kazakhstan

The unemployment rate is expected to remain stable but with a growing population more people may not find work. Economic uncertainty has an impact on low-income households as job prospects shrink, consumer prices and loan rates rise, and lack of savings means there is no financial cushion. Women, particularly those from households headed by women with children and elderly women on their own, are among the most vulnerable during periods of economic shocks.³⁰ In order to assuage social tensions, the government has launched a new fiscal stimulus in 2019. At the end of February 2019, a KZT 2.35 trn package was announced to fund 25-30% increases in the lowest public-sector salaries from July 1st and larger social security benefits for low-income groups. An additional KZT 50bn per year for seven years was announced to build 40,000 new rental homes for large and low-income families. This package is expected to widen the budget deficit to 1.1% of GDP in 2019³¹.

The wage gap between women and men remains persistent. In 2012, women in paid employment earned on average 31 percent less than men, but in 2015 the wage gap widened to 34.1 percent. When comparing only those incomes below \$75,000 per year, women earn only 57% of what men earn based on 2017 data from the World Economic Forum.³² Although the share of the shadow economy decreased from 34.8% to 28% from the beginning of the 1990s to 2015, it is still high.³³ The gap in wages between women and men can in part be attributed to social norms and stereotypes that persist in society. Women are concentrated in areas such as administrative and support services, and in education and health that have lower levels of pay. While women are legally entitled to equal pay, they are often offered lower salaries. Women are also barred from certain trades or construction-related professions that are higher paying. The wage gap is also due to women having less time to devote to paid work as they must spend more time on unpaid domestic work. Also, in all areas of both the public and private sectors, women are less likely than men to reach

²⁹ <https://economy.kz/>

³¹ Economist Intelligence Unit, Country Report, August 2019

³² <https://www.adb.org/documents/kazakhstan-country-gender-assessment-2018>

³³ https://kz.expert/en/news/analitika/476_the_shadow_economy_one_third_or_more

senior-level positions with higher wages. The Committee on the Elimination of Discrimination against Women's (CEDAW) concluding observations on the fifth periodic report of Kazakhstan 2019³⁴ welcomed the progress made by the Government on promoting women's access to employment but encouraged a range of measures to close the gap, including repealing the list of prohibited occupations for women and promoting a positive image of women in business and professional life to delink women's and family rights. Whilst the division of responsibilities within families remains rigid and women experience a double work burden of home-related tasks and employment in the labor force, growth in the economy will be stifled.

Consumer price inflation slowed to 6% in 2018, down from 7.4% in 2017. In the first half of 2019, despite a sharp acceleration in food price growth, inflation decelerated to 5.1% year on year, compared with 6.4% in the prior year, although it picked up slightly, to 5.4% in July. The decline was mainly driven by a sharp deceleration in services inflation owing to the government's decision to lower tariffs for electricity, natural gas, coal, water and telecommunications from January 1st³⁵.

Kazakhstan ranked a respectable 28 out of 190 economies (score of 77.89/100) in 2019 in the Doing Business Index.³⁶ At the same time, it is noted that the economy is dominated by state-owned enterprises, which weakens incentives for private investment and thwarts competition. The government directly or indirectly owns the main network sectors of the economy and has full ownership and control of the largest firms in the gas sector, in several transport sectors, post, mobile services, and electricity (distribution, supply and generation) and has a majority stake in firms in other sectors. Many of Kazakhstan's initiatives to support private sector development include state support programs that lessen the role of the market and distort incentives. Kazakhstan's many private sector development programs rely heavily on import tariffs, soft loans, subsidies (including transport subsidies, operational subsidies and subsidized loans), SOE support, export taxes or restrictions, and localization requirements, among others. This creates an uneven playing field for the private sector, which is exacerbated by the lack of transparency in the allocation of subsidies. These private sector development programs also incentivise firms toward capturing subsidies rather than improving competitiveness.³⁷

1.4 Social Dimension

Over the years Kazakhstan has reduced the proportion of the population living in poverty. The subsistence minimum in Kazakhstan was 23,738 KZT/month in 2017 (60% of the subsistence minimum was assumed to be spent on the food basket). Since January 2018, the methodology was changed, and non-food goods and services now constitute 45% of the subsistence minimum. In 2013-2017 the proportion of people living under the subsistence line remained stable (see Table 3) and increased in 2018 (4.3% total, 2.5% urban, 6.7% rural) – this can be partially explained by changes in the structure of the consumer basket. In 2018 the SML was set at 27,072 (which equals roughly 2.6 USD/day)³⁸. The minimum pension in

³⁸ Average USD/KZT exchange rate of 2018 is calculated as 344.4 based on <https://www.x-rates.com/average/?from=USD&to=KZT&amount=1&year=2018>

Kazakhstan is 33,745 KZT.³⁹ Although minimum wages were increased as of 1 January 2019 from 28,284 to 42 thousand KZT,⁴⁰ it can still be argued that recipients of minimum pension and wages are vulnerable to fall below the subsistence line. It can be further argued that for an upper-middle income country, the SML is set too low. If USD 5.5 PPP per day is used, the percentage of people living in poverty increases.

Table 3 Subsistence Minimum and Poverty Levels

| | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 |
|---------------------------------------|--------|--------|--------|--------|--------|--------|
| Subsistence minimum/m (KZT) | 17,789 | 19,068 | 19,647 | 21,612 | 23,783 | 27,072 |

In terms of wages, the highest average wage was earned in Atyrau oblast (299,485 KZT) and the lowest in Turkestan oblast (106,916 KZT). Workers in agriculture earn the lowest wages (88 632 KZT), while the highest paid workers are found in mining (385,228 KZT) and financial services (315,191 KZT).⁴²

Over the years of independence, Kazakhstan was able to improve its HDI standing (see Table 4 below), however average national performance on human development, masks a very uneven performance at the regional level (see section 1.6 for more detail).

Table 4 HDI Trends, 1990-2017

| | Life Expectancy at Birth | Expected Years of Schooling | Mean Years of Schooling | GNI per capita (2001 PPP \$) | HDI Value |
|------|--------------------------|-----------------------------|-------------------------|------------------------------|-----------|

The value for the Gini index in Kazakhstan in 2017 was 27.5, up from the previous year (27.2) and higher than in 2015 (26.50)⁴³. The Gini index varies by region. The highest level of inequality is found in Akmola, Karagandy and East Kazakhstan and the lowest level in Mangystau, Kyzylorda, South Kazakhstan and Pavlodar, with a Gini index of less than 0.22⁴⁴.

Kazakhstan has made some progress in terms of gender equality – the ages at which men and women can retire with full pension benefits have been equalized (although it can be argued that this means a postponement of a guaranteed monthly income for many ‘self-employed’ women),⁴⁵ secondary education attainment is similar for girls and boys (around 99.5%) and more women (55.9%) than men are in university. Women are much more likely to proceed to postgraduate education: with 61.2% of master’s-level students and 60.9% of doctoral students being women. Maternal mortality decreased from 60.9 for every 100,000 live births in 2000 to 14 by 2018⁴⁶. Kazakhstan ratified the Convention on Elimination of all Forms of Discrimination Against Women (CEDAW) in 1998. It also ratified the Convention on the Political Rights of Women. It is a member of UN Human Rights treaties ensuring civil, political, economic, social and cultural rights which include the provision of non-discrimination and equality. Kazakhstan adopted a ‘Concept of Gender and Family Policy of Kazakhstan’ in 2016 to ensure tangible implementation of equal rights and opportunities for women and men in compliance with its international obligations and national legislation.

Recently however, Kazakhstan fell on the World Economic Forum’s Global Gender Gap Index 2020⁴⁷ compared to 2018, by 12 points (to 72 of 153 countries in 2020). The Index includes measures for economic participation, educational attainment, health and survival and political empowerment (which scores the lowest ranking of these categories) (106 out of 153 countries). Despite the high numbers of women in employment and in full-time education, Kazakh society is prone to traditional perceptions about the roles of women and men. The division of responsibilities within families remains rigid and women experience a double work burden of home-related tasks and employment in the labor force. Patriarchal norms remain dominant in the country. An assessment of the situation in Kazakhstan undertaken in 2010 and which remains relevant today found that “those working in government who are familiar with the term [gender] understand it as only addressing women’s issues, or ensuring equal participation of men and women in government committees or boards”. When women’s disadvantaged position in society is acknowledged, it is often understood as the product of inherent differences between the sexes and not as arising from socially constructed inequalities⁴⁸.

For example, higher education fields of study in Kazakhstan remain highly gender-segregated - women continue to be overrepresented in traditional areas of study, and are less likely to participate in science and technology related studies⁴⁹. Women are concentrated in service spheres, like education and health (72% of women are employed in the service sphere). Kazakhstan has 191 jobs which are prohibited for

⁴⁹ Kazakhstan Country Gender Assessment. ADB (2018)

women (metalworking, selected construction jobs, metallurgical works, etc.). Women comprise 42% of SME owners in Kazakhstan, albeit in 2018 the SME share of the country's GDP was 28%. At the same time, women are underrepresented in executive positions in the majority of sectors of economy with the exception of education (for instance, only 19% of CEOs, Members of the Board of Directors, Members of the Board in private banks are women).⁵⁰ Many economically active women are unemployed or underemployed because of their reproductive and housekeeping roles. It is estimated that there are two million women categorized as 'self-employed'. These women are employed in the informal sector, and are denied all social guarantees, such as maternity benefit, sickness benefit, and pensions.⁵¹ Women are more likely than men to take time off for children, thus potentially limiting their career advancement. Women in Kazakhstan spend more time on domestic tasks than men, even though most are also economically active⁵².

The prevalence of gender-based violence remains an important socio-economic barrier for women in Kazakhstan. According to a survey by the Committee of Statistics 17% of ever-partnered women aged 18-75 have experienced physical and/or sexual violence, 21% of such women have experienced psychological violence and 7% report experiencing economic violence, with every one out of three women suffering from a form of physical, sexual or other form of violence.⁵³ In 2010, the Law of the Republic of Kazakhstan dated December 4, 2009 "On the Prevention of Domestic Violence" came into effect. Special units have been set up in the country to protect women from violence and the number of restraining orders to protect victims of domestic violence is growing. Nonetheless, CEDAW expressed concern among others with the lack of revision of the definition of rape (Article 120 of the Criminal Code) which continues to be based on penetrative vaginal intercourse and requires the element of violence or threat of violence rather than lack of consent, and that domestic violence, which remains severely underreported, is still considered a private matter in the State party (CEDAW concluding observations November 2019 para 25(b) and (c)).

In 2017 domestic violence and gender-based violence was decriminalized. A law was adopted which moved Articles 108 and 109 of the Criminal Code of the Republic of Kazakhstan ("Intentional infliction of light bodily harm" and "Beating") from the criminal to the administrative code. With the changes in the legislation, a husband/partner who has beaten his wife/partner can be sentenced for 15 days or pay a \$122 fine. CSOs working in the sphere of domestic violence and managing crisis centers indicate an increase in the number of women (about 30%) receiving social services in crisis centers after this decriminalization.⁵⁴ There are several other factors that are encouraging violence against women: a) control by men over partnered women – every third woman mentions at least one such case in her lifetime; b) existing legislation does not criminalize domestic violence, causing feelings of impunity and signaling tolerance; c) children witness violence and it might cause trauma and/or encourage an attitude

⁵⁴ UN Women Country Office Kazakhstan the analytical note regarding decriminalization in Kazakhstan, 2019.

towards normalizing violence; d) lack of access to specialized services, which makes it difficult for women to seek help.⁵⁵

And yet at the same time, there is a premature perception that women have already attained equal status. For example, during key informant interviews conducted for the ADB's Country Gender Assessment, many government respondents stated their belief that actions to further remove barriers to inequality were not as high a priority for Kazakhstan as for other countries in the region given the progress already made⁵⁶.

In the context of gender, it should also be mentioned that some social norms also negatively affect men who face enormous pressures to be a 'real man', to demonstrate physical and emotional strength, and to provide financially as the family 'breadwinner'. The pressure to remain emotionally resilient often prevents men from seeking help when they experience anxiety, depression and other mental-health issues and they often resort to drinking to address the challenges they face.⁵⁷ There is a difference in life expectancies for males and females. For males, the life expectancy is around 68.85 years, while the females have a life expectancy of 77.19 years.⁵⁸

The National Commission on Women's Affairs, Family and Demographic Policy under the President of Kazakhstan was established in 2006 and is the primary institution for the realization of Kazakhstan's gender equality strategy. It is relatively high-level but requires more authority and operational capacity to mainstream gender across different sectors, or to effectively monitor the implementation of gender equality policies. The Committee on the Elimination of Discrimination against Women's (CEDAW) concluding observations on the fifth periodic report of Kazakhstan 2019⁵⁹ urged the Government of Kazakhstan to recognize women as a driving force of sustainable development of the country and to adopt relevant policies and strategies to that effect. It urged Kazakhstan not to restrict women's rights to the family sphere.

Kazakhstan has managed to reduce child and infant mortality. The under-five mortality rate was reduced from 53 in 1990 to 9.9 per 1,000 live births in 2017.⁶⁰ There is a notable decline of underweight and stunting prevalence rates among children under five. 8% of children are stunted or too short for their age and 3.1% are wasted or too thin for their height.⁶¹ Stunting varies significantly by region, with 11.8% for the Atyrau region and 2.3% for North Kazakhstan⁶². At the same time, almost 20% of children aged 6 to 9 years suffer from excessive weight or obesity⁶³ that is mostly a result of unhealthy eating habits and

insufficient physical activity.⁶⁴ Obesity is most common in children from high-income families or with relatively few children and is often linked to excessive consumption of sugar, sweets, commercial sweet drinks, saturated fats and trans fatty acids.⁶⁵ The birth rate for adolescent girls aged 15-19 years remains high at around 25/1,000 live births in 2018⁶⁶. A 2018 survey of 4,360 adolescents aged 15-19 showed that about 30% were sexually active, with over 40% of these having had more than one partner and not all used protection. Only about 9% of the total number of adolescents surveyed had comprehensive knowledge about HIV⁶⁷. Despite significant progress, the number of abortions (every fifth pregnancy ends with an abortion⁶⁸) and teenage pregnancies (25/1,000 births for 15-19 years of age) are still high and the contraceptive prevalence rate has been stagnating for the last 15 years.

The national budget, user fees and voluntary health insurance are the main sources of financing for healthcare, although the share of out-of-pocket-pay is on the rise⁶⁹. According to the Ministry of Health, 3.3% of GDP was allocated to the health sector in 2018, which is modest relative to the OECD average of 8.9%. Total private expenditure was 627 bn KZT in 2018, in comparison with state expenditure of 940 bn KZT.⁷⁰ As a legacy of the Soviet period, the structure of service delivery remains hospital-centric, although primary healthcare (PHC) services in urban and rural areas are provided through an extensive network of more than 520 PHC facilities (29% of them are private),⁷¹ which offer diagnostic procedures; treatment of the most common illnesses and injuries; curative and preventive measures; immunization; community awareness raising and health education; and mother-and-child health protection measures. Implementation of Compulsory Social Health Insurance is under way and will be fully operational from 2020⁷².

Kazakhstan is one of 18 countries worldwide with a high burden of multiple-drug resistant tuberculosis (MDR-TB): about 5,000 cases annually (out of 19,000 total TB cases in Kazakhstan). The spread of non-communicable diseases (NCDs) is also taking a toll socially and economically: NCDs contribute to 84% of deaths in Kazakhstan. Kazakhstan has almost eliminated transmission of HIV from mother to child, however, the most vulnerable groups, including youth and migrants, remain at high risk due to limited access to health services.⁷³ According to UNAIDS 2019 estimates, Kazakhstan shows an increase of 35% of new infections and an incidence to prevalence ratio of 10 which puts Kazakhstan among the countries with some of the worst dynamics of the epidemic⁷⁴.

Kazakhstan has the second highest road crash fatality rate (17.6 fatalities per 100,000 population – as estimated by the WHO for 2016) after Tajikistan, among all Central Asian countries. Pedestrian fatalities comprised 31 percent of all road crash fatalities in 2016 which increased from 23 percent in 2013.

The country enjoyed strong progress in the area of education. Almost all children of a given class age were enrolled in primary and secondary education with ratios approaching, or above, 100%.⁷⁵ Gender parity is also high for both enrolled and achieved rates. Early childhood education (ECE) programs benefited from extensive public investment and a strong focus on policy. As a result, the great majority of children over the age of 3 receive some form of early education. In general, 90.8% of children who are currently attending the first grade of primary school attended pre-school the previous year⁷⁶. The number of years of schooling a child of school entrance age can expect to receive has increased from 12.3 years in 2000 to 15.1 in 2017.⁷⁷ The literacy rate of young people aged 15–24 years in Kazakhstan is 99.9%.⁷⁸

Student learning outcomes, as measured by PISA, demonstrate improvements over the last years but remain below the OECD average.⁷⁹ According to PISA data, the language of instruction in schools (Kazakh or Russian), school location (urban or rural), and the socio-economic background of students and schools make a difference in students' performance. Performance in math does not vary by gender but reading remains a major challenge for boys.⁸⁰ In 2015 Kazakhstan showed higher PISA scores than in 2012⁸¹, however according to OECD “the national coders were found to be lenient in marking. Consequently, the human-coded items did not meet PISA standards and were excluded from the international data. Since human-coded items form an important part of the constructs that are tested by PISA, the exclusion of these items resulted in a significantly smaller coverage of the PISA test. As a result, Kazakhstan's results may not be comparable to those of other countries or to results for Kazakhstan from previous years”⁸².

The number of inclusive schools in Kazakhstan that are fully accessible and have properly trained educators is growing but their numbers are insufficient to support all children with special education needs. There were 102,610 7-18 year old children and adolescents with special educational needs, but only 23,940 of them were enrolled in mainstream schools in 2017 despite the fact that conditions for inclusive

education were created in 3,873 or 55% of all schools.⁸³ Over 15,000 children with special learning needs received their education at home⁸⁴. One recent survey has found that 2,523 children (27.6% out of the total number surveyed) were not studying anywhere.⁸⁵ Psychological-medical-pedagogical consultations (PMPCs) are a key barrier to children with disabilities studying in mainstream schools, as they follow the medical model of disability in assessing the children with disabilities to make a recommendation on the forms of their education.⁸⁶

The percentage of children and adolescents in Kazakhstan is high at 31.4% of the total population. In 2017 9.5% of 15-24 year olds were neither in employment nor in education or training (NEET).⁸⁷ There is an increase of urban young people over rural young people, from 54.9% in 2014 to 56.5% at the beginning of 2018.⁸⁸ This growth of the urban youth could indicate the migration of the youth to the cities in search of better opportunities. According to a sociological survey by the Research Centre ‘Youth’ in 2018, 42.2% of young people permanently experience the problem of unemployment, 30.5% while applying for certain specialties, and only 8.5% do not experience any difficulties. Young women are likely to face additional problems (see Box 1).

Regional disparities could also be traced in unemployment, when the youngest job seekers live in particular regions of the country - Aktobe (53.1%), Atyrau (58.0%), Mangistau (73.3%), Turkestan (51.4%), as well as in Nur-Sultan (73.4%).⁸⁹ These regions have also registered an increase in religious

radicalism which could be assumed to have economic and social roots.⁹⁰

Kazakhstan employs a comprehensive set of social protection policies which includes both social insurance programs (e.g., pensions and unemployment benefits) and social assistance. Social assistance includes a number of poverty-targeted benefits, a set of categorical benefits to cover vulnerable groups and a set of universal benefits. Universal benefits include a one-time allowance for each birth and a benefit for parents caring for children with disabilities. Categorical benefits, supporting specific groups without a means test, include the state benefit for childcare up to 1 year (for those not insured in the compulsory social insurance system), disability benefit, loss of breadwinner allowance and special benefits for families with many children and for children with disabilities⁹¹. Coverage of social assistance is generally pro-poor and contributes to lowering income poverty, especially for persons with disabilities and those unable to work. Almost half of households in the bottom income quintile receive a social transfer, compared with one in five in the top three income quintiles.⁹² Households across all income quintiles receive poverty-

targeted transfers. Although the inclusion error for poverty-targeted social transfers is rather small, there is a large exclusion error. This means that while a relatively small share of high-income earners receives poverty-targeted social assistance, a large share of low-income households does not receive the transfers they are entitled to⁹³.

Universal transfer payments are more generous than targeted transfer payments but the combination still fails to guarantee the minimum subsistence level for poor households with children, particularly in rural areas. Overall, the level of benefits targeting children in low-income families is too low.⁹⁴ In 2018, the targeted social assistance system was improved and combined with three existing social benefits for low-income families such as special benefits for families with four or more children, benefits for children under 18, and targeted assistance for families with incomes below 50% of the subsistence minimum (previously 40%) in the form of unconditional and conditional cash assistance. In 2018, there were 1,006,748 childcare benefit recipients and 86,856 children with disabilities received cash assistance.⁹⁵

Five regions of Kazakhstan are recognised by the World Organisation for Animal Health (OIE) as free of FMD with vaccination, 9 other regions are free of FMD without vaccination⁹⁶. Kazakhstan is also officially free of AHS (African horse sickness) and African swine fever⁹⁷.

1.5 Environmental Challenges

Kazakhstan inherited significant environmental challenges from the Soviet past, such as the drastic contraction of the Aral Sea and industrial and nuclear waste. This legacy, coupled with resource-dependence for economic growth, creates a complex picture. More than 75% of Kazakhstan's territory is exposed to a range of natural hazards, mostly floods, followed by extreme temperature events, earthquakes, landslides, mudflows, storms and wildfires. Specific environmental tasks also include improving the efficiency of energy use, waste management, addressing the shortages of water resources and the increase in air pollution⁹⁸.

The area of the Forest Fund (area under the responsibility of forest authorities, although much of it does not have forest cover) is 29.4 million ha, just over 10% of the country's land area. Of this, 3.4 m ha are considered as "forest" by the international definition (crown cover over 10%) and 9.5 m ha "other wooded land", with crown cover between 5 and 10%, which notably includes the large areas of semi-desert saxaul forest. The total of "forest and other wooded land" (FOWL), or "land with forest cover" in the national terminology is 12.9 m ha. FOWL accounts for just under 5% of the total area of Kazakhstan, although forest, strictly defined, accounts for only 1.2%⁹⁹. Over 1.5 million ha of forest landscape will be restored by Kazakhstan under the Bonn Challenge by 2030¹⁰⁰.

¹⁰⁰ <http://www.bonnchallenge.org/content/kazakhstan>

Kazakhstan is a large emitter of greenhouse gases (national emissions amounted to 353.2 million tons of CO₂ equivalent in 2017).¹⁰¹ Air pollution is particularly severe in larger urban areas, such as Almaty and Nur-Sultan; and air quality is becoming a serious health issue¹⁰². Industrial air emissions have been decreasing since 2008, despite a constant increase in total industrial output. The highest emissions are of SO₂, TSP and NO_x, which totalled 761,500 tons (53.5%), 349,200 tons (24.5%) and 249,300 tons (17.5%), respectively, in 2017. Air emissions from industry are responsible for significant air pollution, notably in urban centers where industrial facilities are located, such as Termitau, Karaganda, Pavlodar and Aktobe. These emissions are potential sources of health problems for industrial workers and the population living nearby (e.g. respiratory diseases), especially when they contain heavy metals (e.g. arsenic, cadmium, lead).¹⁰³

Progress in improving energy efficiency has been relatively slow and uneven. New projects in non-resource sectors such as renewables and other forms of clean energy have been limited; involvement of the private sector is challenged due to serious barriers to investment¹⁰⁴. Kazakhstan subsidizes the use and production of fossil fuels, such as coal, gas and oil, as well as electricity, which are consumed directly by end users or as inputs to electricity generation. It is among the 15 countries with the highest subsidies in the world but is number one in subsidizing coal. The Government undertook some reform of subsidies: most of the direct support for electricity and heat consumers was eliminated, while the Government still provides indirect support by maintaining electricity and heat tariffs at low rates¹⁰⁵.

Kazakhstan is extremely prone to droughts, earthquakes, river floods, mudflows and landslides. Earthquakes are a risk especially in the south and south-east of the country, affecting an annual average of about 200,000 people and about \$1 bn in GDP. On an average annual basis there are 3,000-4,000 emergency situations in Kazakhstan resulting in about 3,000-5,000 injuries and several dozen fatalities and estimated losses of 16 bn KZT¹⁰⁶. In 2017, 10,509 persons had dwellings damaged or destroyed by disasters.¹⁰⁷ Flood hazards, including those originating from glaciers melting, pose a significant and more frequent risk and have resulted in widespread displacement and secondary impacts such as mudflows and landslides. Currently, over 26% of the population lives in areas prone to mudflows, including the nearly 1.4 million residents of Almaty. Based on climate projections, an increase in torrential rains as well as the formation and outburst of glacier lakes will bring more frequent mudflow events¹⁰⁸. In addition, natural hazards could trigger technological disasters (so-called “NaTech” events). This increases the accident risks for numerous hazardous industrial facilities in Kazakhstan, such as tailing management facilities, which hold the waste resulting from mining operations.¹⁰⁹

Since the mid 1930s, the average annual air temperature in Kazakhstan has increased by an average of 0.26°C for every 10 years. The climate has become warmer, and the dynamics of its change is largely synchronous with global climate change. The main consequence of the changes in temperature and precipitation regimes will be the shift north of the humidity zones boundary. Therefore, the most vulnerable sectors to climate change will be agriculture and water management. A specific increase of aridity is reported in Southern Kazakhstan with serious implications for food security.¹¹⁰ Kazakhstan will also be impacted by changes in river run-off due to glacier melting.

In 2014 Kazakhstan adopted the Law on Civil Protection which covers all stages of the disaster management cycle. Along with this Law, Kazakhstan established the Interagency State Commission for Emergency Situations which consists of line ministries and state agencies, as well as a number of national companies. The Commission meets semi-annually and gathers immediately in case of emergency. At the local level similar commissions have been formed.

Disaster prevention and management in Kazakhstan is within the powers of the Committee for Emergency Situations of the Ministry of Internal Affairs (CoES MIA). While most of the activities of the CoES are focused on reactive measures, recent efforts in disaster risk reduction and emergency prevention resulted in the establishment of the Disaster Risk Reduction and Control in Civil Protection. Regular preventive activities are included in the Kazakhstanian's Roadmap "Set of measures for the prevention and elimination of flood threats for 2017-2020". This Roadmap consists of 521 practical measures for the protection of territories and transport infrastructure. In two years by 2019 construction and strengthening of 316 km of protective dams and ramparts, repair of 268 km of protective structures, shore protection and dredging of 237 km of rivers and the construction of 225 km of rainwater drainage systems. Due to the measures taken by the CoES MIA of Kazakhstan, the number of affected settlements decreased by 29 times.

Climate change has a negative impact on water resources, crop production (Kazakhstan being a major supplier of wheat), natural grazing land, cattle and sheep breeding and forestry. This, of course, will affect food security and water supply, energy security, human health and could lead to an increase in poverty in the country.¹¹¹ Droughts are already a significant challenge in Kazakhstan, where up to 66% of the total land is affected. Water availability in the medium and long term is likely to be the most strongly impacted climate risk, with important repercussions for both domestic and industrial needs¹¹².

One of the most significant effects of global warming in Central Asia, including Kazakhstan, is glacial melting and the associated formation of glacial lakes. Around the beginning of the 1970s, accelerated glacier mass loss was reported in the region¹¹³. Today's rate of glacier loss in CA is 0.2–1% per year in volume. Due to glacier melting and lake formation, there is an increased danger of glacier lake outburst floods (GLOFs), which confound and exacerbate water-related threats to mountain communities, their settlements, livelihood, and infrastructure located on river floodplain areas.

1.6 Interlinkages among the Three Dimensions of Sustainable Development

¹¹⁰ Managing disaster risks and water under climate change in Central Asia (Swiss Agency for Development and Cooperation).

¹¹¹ Baisholanov, B.S. Agrometeorological Support of Agriculture of the Republic of Kazakhstan. Prepared for UNDP /USAID project "Improving the Climate Resiliency of Kazakhstan Wheat and Central Asian Food Security" (2013)

¹¹² Climate Risk Profile Central Asia, USAID.

¹¹³ Sorg et al., 2012; Farinotti et al., 2015; Hoelzl et al., 2017.

In Kazakhstan, economic, social and environmental challenges are intrinsically interlinked. Its spectacular economic growth since independence depended largely on exploiting its fossil fuel wealth. Kazakhstan reached the upper middle-income level and is likely to stay at this level of income. It was able to significantly reduce poverty levels. However, recent social unrest has demonstrated that Kazakhstan was unable to redistribute the newly acquired wealth fairly. Given that economic growth is expected to remain flat and the population is projected to grow (see Table 2 above), the fiscal space to provide social assistance may be narrower and the country will need to use a more sophisticated policy mix to ensure that ‘nobody is left behind’.

Environmental and climate change issues may result in decreasing water availability and quality as well as the need to adapt agricultural practices. Given that 42.1% of the of the population resides in rural areas, the impact of climate change might acquire a social dimension. An example of one of the poorest regions, Kyzylorda region, which is also the location of the Aral Sea disaster, is a lesson that policymakers are well-advised to heed.

Table 5 highlights the priority issues, how they are interlinked and shows corresponding SDGs. One of the main priorities would be to tackle inequality and vulnerability of large parts of the population in Kazakhstan. Data overwhelmingly suggests that economic development and the social situation in the regions within Kazakhstan is uneven. Figure 2 plots the proportion of people living under the minimum subsistence line and economic growth by region (both data for 2018). It shows that only Atyrau (richest) and Turkestan (poorest) regions demonstrate a correlation of economic growth and poverty levels. In most other regions there are no such correlations, suggesting that the economic growth alone is not expected to even out social challenges. Regional inequalities exacerbate the existing gender inequalities and access to medical services and energy.

Table 5 Main Priorities and Corresponding SDGs

| Main Priorities | Sub-issues | Corresponding SDGs |
|--------------------------|------------------------------|--------------------------|
| Inequalities | Regional inequalities | 1, 2, 3, 4, 5,7,10,11 |
| | Gender inequality | |
| | Equal access to services | |
| Economic Diversification | Access to quality education | 4,8,9, 10, 11, 12 |
| | Demography/Urbanization | |
| | Labor productivity | |
| Regional Challenges | Migration/refugee issues | 6, 7, 13, 14, 15, 16, 17 |
| | Prevention of radicalization | |
| | Water issues | |
| | Adaptation to climate change | |

Access to quality education including life skills and the skills necessary for the economy of the 21st century is a challenge that drives both inequality of opportunities and creates problems for economic diversification, which is difficult to achieve without a productive and skilled labor force. People are increasingly concentrated in urban settings due to internal migration. In 1996-2015 the number of migrants increased twofold. The cities of Almaty and Astana and the Atyrau and Mangystau regions are the most attractive. The migration outflow of population from villages and small and middle-sized towns to the capital, large and big cities is related to social and economic factors¹¹⁴.

¹¹⁴ National Report of the Republic of Kazakhstan on Housing and Sustainable City Development HABITAT III (2016)

Equal access to quality education is particularly important as it is related to the second main challenge – economic diversification. According to the WTO, fuel and mining products constituted 79.6%¹¹⁵ of Kazakhstan’s exports in 2017, while agriculture and manufacturing accounted for just 5.2 and 15.2% respectively. This suggests that the labor productivity of 42.1%¹¹⁶ of the rural population remains low. A skilled and productive labor force is an essential ingredient of economic diversification.

A set of forward-thinking demographic/migration policies is needed in Kazakhstan - certain encouragement of internal migration may be needed to ensure that the disproportionate level of population density does not result in a lack of a skilled labor force where it is most needed and thus influence economic development.¹¹⁷

Management of migration flows is an issue interrelated with the third main challenge of Kazakhstan – how to respond to regional (Central Asia and beyond) challenges. Migration from Kyrgyzstan, Tajikistan and Uzbekistan exceeded 1,265,000 by the end of 2016. The highest concentrations of migrants are in South Kazakhstan, Almaty, Mangystau and Nur-Sultan, where they are mostly employed in construction (Nur-Sultan, Almaty, South Kazakhstan region), agriculture (South Kazakhstan region, Almaty region) and trade (other regions)¹¹⁸. This adds to already existing economic pressure on these regions.

Figure 2 Regional Economic Growth and Poverty Levels

Source: *economy.kz* and *stat.gov.kz*

The transboundary nature of Kazakhstan’s water reserves means that challenges in availability of water should be tackled at the regional level. In the past water has been a difficult issue, given the differences between the states - Kazakhstan and Uzbekistan are short of water, and Kyrgyzstan and Tajikistan short of electricity. Uzbekistan and Kazakhstan have argued over hydropower projects, which Kyrgyzstan and Tajikistan need to keep the lights on. At various times, shared resources have been used as a political tool

¹¹⁵ https://www.wto.org/english/res_e/statistics_e/daily_update_e/trade_profiles/KZ_e.pdf

¹¹⁷ Ibid

¹¹⁸ Migrant Vulnerabilities and Integration Needs in Central Asia: Assessing Migrants’ and Community Needs and Managing Risks, IOM (2017)

– Uzbekistan by switching off power grids, Kyrgyzstan and Tajikistan by threatening to block the downstream flow of water¹¹⁹. A 2018 summit (15-16 March) of four Central Asian leaders brought hope that these issues can be resolved¹²⁰.

Water, along with land degradation and threats to biodiversity, constitutes a climate change-related issue, which requires a global, multilateral response. Kazakhstan, on the one hand, is a large emitter of greenhouse gasses and, on the other hand, needs to adapt its agricultural and water use practices.

2. National Vision for Sustainable Development

The overarching objective of Kazakhstan is to reach the group of the World's 30 most developed countries by 2050. Government strategies and programmatic documents reflect actions aimed at reaching this goal. The Government's vision and priorities are outlined in the three-level process of strategic planning, regulated by Government Decree #790 dd 22.11.2017 which states the following hierarchy (Figure 3).

Figure 3 The Hierarchy of the National Strategic Planning in Kazakhstan

Source: adapted from the Government Decree #790 dd 22.11.2017

Thus, the major strategic documents in Kazakhstan are Kazakhstan 2050 Strategy and the Strategic Development plan to 2025. This plan aims at modernizing the economy, institutions and society and includes specific indicators of achievement for 2021, 2025 and 2050. The plan 2025 also contains an important gender initiative to be implemented through gender-sensitive programming. The government is keenly promoting several flagship policy areas, notably increasing renewable energy supply, improving water efficiency and reducing greenhouse gas emissions. The green economy agenda is reflected in the Green Economy Concept (2013), the subsequent launching of a Green Bridge initiative and of the International Green Technologies and Investment Projects Center (IGTIPC) in 2017-2018¹²¹.

¹²⁰ <https://www.rferl.org/a/central-asian-summit-astana-kazakhstan-uzbekistan-tajikistan-kyrgyzstan-turkmenistan/29101686.html>

¹²¹ Final evaluation of the Partnership Framework for Development (PFD) 2016-2020.

In October 2018, President Nazarbayev made an important speech outlining the development priorities for the country¹²². The bulk of priorities were social in nature, underlying the need for the growth of incomes through increase of salaries, but also through support to business environment, export-oriented industries, labor productivity and modern technologies for agriculture, innovation; improvement of quality of life through increasing expenditures and improving the quality of education and healthcare; creating a comfortable living environment through affordable housing and better territorial development; improvements in governance by transforming and modernizing the law enforcement and judicial system, increasing the effectiveness of government agencies and fighting corruption.

After the 2019 elections, the new President made some changes in the composition of the government¹²³ and announced his working priorities at a Government meeting on 15 July. Some of these priorities included increased productivity of agricultural output, together with creation of jobs; enterprise development; a stable macro-economic environment that would encourage FDI; improved quality of governance and of use of budget allocations; strengthening education and healthcare; improved territorial development.¹²⁴ Priorities have not changed substantively between the two speeches and are in line with the strategic development agenda of Kazakhstan.

3. Country Progress Towards the 2030 Agenda

The Government of Kazakhstan has created a high-level institutional mechanism to oversee the implementation of the SDGs. A Coordination Council on Sustainable Development Goals was established, chaired by the Deputy Prime Minister, with five inter-sectoral working groups, dedicated for the “5 Ps” of SDGs - People, Planet, Prosperity, Peace and Partnership, each enjoying the participation of civil society, the private sector and other stakeholders. The Ministry of National Economy is the coordinating body of the Council, supported by the JSC Economic Research Institute, which provides expert and analytical support, serving as the Secretariat¹²⁵.

Two different analyses were made to gauge the integration of SDGs into the national planning system. The UN MAPS mission that took place in 2016, concluded that 77 of 126 SDG issue targets (61%) were covered in national and sectoral plans. The JSC Economic Research Institute, after training by the UN, performed an analysis of all existing NPS documents, including concepts and doctrines, ahead of VNR preparation in 2019 and found that the level of SDG incorporation in strategic documents and programs was 79.9%¹²⁶ as it is shown below (Figure 4).

Kazakhstan’s Voluntary National Report was presented to the HLPF in July 2019. It contains the analysis of all the 17 SDGs and discusses the next steps the government of Kazakhstan intends to take for the implementation of the goals. The report includes selected indicators for all 17 Goals (many of them disaggregated by sex) and provides data for 2010, 2015 and 2018. The report identifies crucial next steps

¹²⁵ Voluntary National Review, Kazakhstan (2019)

¹²⁶ Voluntary National Review, Kazakhstan (2019)

for the implementation of Agenda 2030, among them defining both baseline and forecast SDG indicators up to 2030; creation of a monitoring and reporting system for SDG indicators; completion of the process of nationalizing SDG objectives and indicators taking into account the national priorities and the “leaving no one behind” principle; and harmonizing budget planning with the SDG objectives and indicators.¹²⁷

The process of nationalizing SDG Targets is already under way. A total of 297 indicators were included for monitoring - 163 global indicators adopted without change; 58 global indicators included with small changes; 41 alternative/proxy indicators were approved, and 35 national indicators were added¹²⁸. The Government plans to mainstream indicators into the documents of the National Planning System and into the official statistics¹²⁹. This will lead to the creation of an SDG database; creation of data sources and calculation methodology on one hand and regular (annual) monitoring and assessment of strategic documents and programs, on the other hand¹³⁰. The Committee of Statistics¹³¹ and the JSC Economic Research Institute¹³² created websites that contain specific information on goals.

Figure 4 The Level of SDG Incorporation in Strategic Documents and Programs

¹²⁷ Voluntary National Review, Kazakhstan (2019)

¹²⁸ Voluntary National Review, Kazakhstan (2019)

¹²⁹ 54 gender-related indicators have been identified by UN Women.

¹³⁰ Since 2017, Kazakhstan is already reporting against DRR related indicators of SDGs 1, 11 and 13 through the Sendai Framework monitoring process.

¹³¹ The independence of the Committee of Statistics, the main provider of official statistics for Kazakhstan, was raised as a concern in the recent Global Assessment of the National Statistical System of Kazakhstan, conducted by the United Nations Economic Commission for Europe (UNECE), in partnership with the European Commission (Eurostat) and the European Free Trade Association (EFTA). See p. 7

http://www.unece.org/fileadmin/DAM/stats/documents/technical_coop/GA_Kazakhstan_Final_Report_EN.pdf

¹³² <https://sdgs.kz/>

4. Leave No One Behind

The concept of “leaving no one behind” goes beyond traditional notions of poverty and requires deeper analysis to identify those people who either already are, or are at risk, of being excluded and discriminated against. This concept calls to identify the patterns of exclusion, vulnerability and inequality and support legal, policy, institutional and other measures to tackle these patterns.

In Kazakhstan, the proportion of people living below the poverty line has remained relatively stable (both living under SML and under 5.5 USD PPP). However, given the devaluation of the KZT, the expected flattening of economic growth and persistent regional inequalities, there is a need to identify the determinants of vulnerability that are important to watch over time.

Location and access to services. Regional disparities are considered one of the root causes of inequalities in Kazakhstan. NHDR 2016 found that in terms of Sustainable Development there are four groups of regions: Nur-Sultan, Almaty, Pavlodar and East Kazakhstan region are leaders (Tier 1), followed by Kostanay, Karagandy, Almaty region, Akmola region (Tier 2). Tier 3 regions are: North Kazakhstan, Aktobe, Atyrau, Jambyl. West Kazakhstan, Mangystau, South Kazakhstan and Kyzylorda constitute Tier 4 regions. In terms of economic prosperity, the regions have also been uneven in the last decade (see Figure 5).

Figure 5 GDP per capita in 2004 and 2015

Source: modified from NHDR 2016

Most of the country’s GDP is concentrated around the administrative cities of Nur-Sultan and Almaty, the main oil-extracting region of Atyrau and the industrial regions of Karagandy and South Kazakhstan. These regions and cities accounted for 55% of the cumulated GDP in 2013¹³³. Inequality in access to energy is also an important factor. In 2018, the gasification rate in the country was 50%. 10 out of 17 regions were gasified: 1. Atyrau region 2. Mangystau region 3. Kyzylorda region 4. Turkestan region 5. Shymkent 6. Jambyl region 7. Almaty region 8. Almaty city 9. West Kazakhstan region 10. Kostanay region.¹³⁴

¹³³ UNDP, National Human Development Report (2016)

¹³⁴ Promotion of Clean and Available Energy to Expand the Rights and Opportunities of Women and Girls in Kazakhstan and Central Asia, Astana, 2018.

The density of physicians per 10,000 population increased from 38.8 in 2010 to 39.7 in 2018, while the density of nursing and midwifery personnel increased from 87.5 per 10,000 population in 2010 to 96.5 per 10,000 population in 2018.¹³⁵ Despite these improvements, shortages of medical personnel in rural areas and their inadequate support, a high turnover of staff and difficulties in retaining qualified staff in remote areas,¹³⁶ poor transportation services, and lengthy travel times to healthcare facilities are likely to undermine access to services in remote areas across the country.

Energy security and access to utilities is also more available in urban settings, where most households have access to central heating (64.2%), network gas (46%), central hot water supply (52.9%), centralized water supply (80.3%), sewerage (73.9%). In the countryside, only 4% of rural households have central heating, 75.7% use stove heating. Only 16.4% of rural households use gas (cooking and heating their houses), the practice of cooking on gas stoves using liquefied gas in cylinders is more common - 69.3% of rural households (along with stove heating fuel). Rural residents mostly take water from a column or a well (55% of households), 11% use imported water, and only 18.7% have running water in the house, and 14.2% have running water outside the house¹³⁷.

Gender disparities also remain a strong predictor of inequality. It should be acknowledged that Kazakhstan made progress in many gender-related indicators – its Gender Inequality Index (GII) for 2018 stands at 0.197 (rank 58). At the same time, Kazakhstan has fallen on GGI over the last 5 years, from 32nd place (with the GGI 0.7218) in 2013, to 52nd place (0.7130) in 2017, and 60th place (0.7120) in 2018.¹³⁸ In Kazakhstan, 99.7% of adult women have reached at least a secondary level of education compared with 100% of their male counterparts. The country also succeeded in reducing its maternal mortality from 60.9 for every 100,000 live births in 2000 to 14 by 2018¹³⁹. At the same time, only 27% of parliamentary seats are held by women (lower house), and female participation in the labor market is at 66.1% compared with 77% for men. Women's participation in the labor force remains concentrated in the service sector, where 71.4% of women are employed compared to 52% of the men. Women and men are evenly represented in agriculture, forestry, and fisheries, where 17.1% of women are employed compared to 18.9% for men. The percentage of women employed in agriculture declined by 34% from 2006 to 2016. However, as women move out of agriculture, they remain in lower-paying service sector positions rather than accessing higher-paying industrial jobs.¹⁴⁰ Some of these and similar issues came up in several conversations held with local NGOs during the preparation of this document (see Box 2).

Violence against women is prevalent in Kazakhstan. According to a survey by the Committee of Statistics, 17% of ever-partnered women aged 18-75 have experienced physical and/or sexual violence, 21% of such women have experienced psychological violence and 7% report experiencing economic violence.

¹³⁹ Voluntary National Review, Kazakhstan (2019)

¹⁴⁰ Kazakhstan Country Gender Assessment, ADB (2018)

Box 2 – Voices of the NGOs

“Inequality is linked to industry. If industry closes in your town, then you have nothing.”

“Social services are available if you are registered (‘propiska’). The rules have been made stricter recently.”

“Some Uralmans (especially from China, Mongolia) do not speak Russian, but have to face officials who sometimes do not speak Kazakh. This hampers their integration.”

“Unregistered religious entities are considered illegal, but sometimes it is difficult to find even 50 people to apply”.

“Environmental literacy of the population is low - in Semey 80% of the families do not know where to get information.”

“Announcements about public hearings are often made inadequately and many people cannot attend.”

“Disabled people have difficulties of access – even in Nur-Sultan, where 70% of buses are accessible, bus stops often are not.”

“Financial services are often inaccessible for rural women.”

Quotes from discussion with various NGO groups.

Gender identity. The LGBT community remains vulnerable in Kazakhstan. The concluding observation of the CESCRC notes that “neither the Constitution nor the domestic legislation of the State Party explicitly prohibits some of the existing grounds of discrimination, such as gender identity and sexual orientation, which contributes to the persistence of discrimination on those grounds in access to employment, healthcare and education. It is also concerned by the lack of tailored legal protection of lesbian, gay, bisexual and transgender persons against attacks and harassment.”

Income/household composition. Low income and/or having 4 or more children can be a cause of vulnerability in Kazakhstan. While many families in Kazakhstan receive Targeted Social Benefits (TSA), the targeting of this benefit could be improved. It would be expected that more beneficiaries would be found where the more poor are. But, while according to the statistical agency 32% of the poor are found in South Kazakhstan, the percentage of TSA beneficiaries in the same oblast is only 6%, and conversely 10% of TSA beneficiaries are from Mangystau oblast, whose percentage of people below the Subsistence Minimum Level (SML) is only 3%. Differences between eligible persons and recipients appear to be explained by the difficulty of access/lack of information (whereby eligible persons in rural areas are relatively less likely to receive these benefits), in fact, agricultural income and assumed income is imputed in the administrative calculation of income and in some cases also by the relative short-

term and seasonal need, which does not materialise in requests for support. At the same time, if families receive unconditional cash benefits because they have children under 7 years of age, they are not being supported with other measures to address the needs of household members, including child-focused social support or measures that could support adults in the household into employment¹⁴¹. A mix of additional services and integrated approaches would need to be introduced in Kazakhstan to include training and skills development, micro-enterprise support, support in returning to work for women who have been on maternity leave for extended periods and/or, support with childcare.

¹⁴¹ Carraro, L, et al. Technical support to improve design of targeted cash transfer program to be more responsive to the needs of families with children, Final Report, 2017.

Age. Children face increased risks of poverty if they live in families residing in rural areas, in single-headed households, in households with low levels of education, unemployment or being out of the labor force, in large households, in families with many children, or in households where a family member has a disability. For example, for each child in the household the risk of living in poverty increases. In 2018, 4.3% of children aged 0-17 years living in urban areas were in households with income below the subsistence minimum (%) in comparison with 10.3% of children living in rural areas.¹⁴² Overall, there is almost a threefold difference in incomes for children living in rich or poor families¹⁴³ that affects their access to quality food, quality healthcare, education, and extracurricular activities.

According to the available data, in 2015, 6% of young girls aged 15-19 were married or in a union, with 5.8% of these with a spouse who was older by 10 or more years.¹⁴⁴ 0.1% of women aged 15-49 also reported to have married before the age of 15 (this figure was 0.2% in 2010-2011).¹⁴⁵ Marriages of young girls under the age of 18 is prevalent in some rural areas and among some ethnic groups.¹⁴⁶ Slightly higher rates are reported for East Kazakhstan (1.3%), Kostanay (0.3%), and Atyrau (0.2%).¹⁴⁷

Violence against children is widespread and can to some extent be attributed to social acceptance of violence in families. In 2017, 39.5% of surveyed general public adults reported using some form of physical violence; children in institutions were two times more likely to experience physical violence from parents/adults (39.5%), compared to children in schools (17.6%).¹⁴⁸ According to the 2016 survey, the following groups of children are the most vulnerable and are at a greater risk of experiencing violence: a) Children in residential institutions; b) Children from families with less than primary or only primary school education. Children whose aggressors have no or primary level education are almost twice as likely to suffer from physical punishment than children whose aggressors have a higher education; c) Children with disabilities living with their families or in institutions; d) Children living with parents consuming alcohol or abusive substances.¹⁴⁹

¹⁴⁸ Robin Haarr, Violence Against Children in Families in Kazakhstan: 2016 Survey of Knowledge, Attitudes, and Practices, 2017

¹⁴⁹ UNICEF and UNFPA, Making the Connection, Intimate partner violence and violence against children in Eastern Europe and Central Asia, 2018.

Although the numbers of children left without parental care have declined considerably, the number of cases of removal of parental rights remains high and was 2,874 in 2018.¹⁵⁰ There are a number of external factors such as economic hardships, changes in social norms and values, and family crisis that may result in social orphanhood. Children can be removed from their families because of parents' alcoholism, drug addiction, imprisonment, asocial way of life, violence against women and children or simply because parents neglect their children. The number of social orphans (children left without parental care) in 2017 was 16,218 children (60% of the total number of children left without parental care).

Disability. Kazakhstan's relevant laws refer to persons with disabilities as "invalids"¹⁵¹. This is contrary to the human rights-based understanding of disability and perpetuates a negative social perception of persons with disabilities and fails to take into account attitudes and environmental barriers that hinder their participation in society. There is no official deinstitutionalization strategy in the country; in fact, the national disability strategy and action plan provides for the creation of more small-scale institutions, rather than encouragement of services for independent living¹⁵². Figure 6 illustrates that although the numbers have declined, there are still substantial numbers of children, with and without disabilities in residential care.

Figure 6 Total Number of Children in Residential Care and the Number of Children with Disabilities in Residential Care (year-end)

Source: UNICEF, TransMonEE, *Monitoring the situation of children and women in Europe and Central Asia*, <http://transmonee.org/>

The discrimination is often manifested in negative attitudes in the general population, medical organizations and law enforcement bodies, e.g. against MSM, among whom self-stigmatization is also widespread. Social stigma against MSM and transgender people increases the vulnerability of these groups to HIV infection. The study of the PLHIV stigma index level in Kazakhstan shows that denial in medical care is a common form of stigma and discrimination. Because of negative experience in medical institutions and widespread homophobia in society, MSM often hide their identity from medical professionals. Gender identity is a major factor in denying access to healthcare. In 2009, the “Soros-Kazakhstan Foundation” study found that 66% of LGBT people hide their identity from medical workers.

¹⁵⁰ The Committee of Statistics of the Ministry of National Economy of the Republic of Kazakhstan, *Children of Kazakhstan. Statistical Yearbook 2019*.

¹⁵¹ According to the definition provided in article 1 of the Law on Social Protection of Persons with Disabilities, an “invalid” is a person with a “permanent medical condition” that prevented the person from functioning independently when support and assistance were not provided.

¹⁵² Report of the Special Rapporteur on the rights of persons with disabilities on her mission to Kazakhstan, 2018.

In 2012, researchers from Johns Hopkins University conducted a survey among 400 MSM in Almaty and recorded that only 3% of respondents informed medical workers about their same-sex relationships. A study among transgender people in Kazakhstan showed that the fear of non-compliance with confidentiality, the lack of qualified doctors, and the difficult availability of such services for transgender people are barriers for transgender people to seek out HIV testing or information support on these issues.¹⁵³ Based on the above, it can be discerned that a woman receiving a basic pension living in a rural setting in a relatively poor non-gasified region is at high risk of being left behind. Women with disabilities or HIV, experiencing domestic violence, or unemployment are also at risk. Families with four or more children are probably also vulnerable - the issue of families with many children and the inadequate assistance they receive from the state has become a subject of recent public confrontation. The rural population (42.1% of total) has higher poverty rates, although only about a quarter of rural households receive social assistance transfers, compared to over 40% in the large cities of Nur-Sultan and Almaty.¹⁵⁴ Despite improvements in mortality figures and educational attainment, children, especially those with disabilities, face disadvantages in terms of access to services.

5. Commitments under International Norms and Standards

5.1. Human Rights Commitments

Currently there are 800 recommendations made by the UN Human Rights bodies, 318 of which by Universal Periodic Review (UPR), 143 by special procedures and 339 by Treaty bodies. Kazakhstan has accepted 262 items or 82 percent of the UPR recommendations. For more details on the progress in implementing these procedures and their link to SDGs, please refer to the figures (7 and 8) below.

Kazakhstan has ratified most of the International Human Rights Treaties, with the notable exception of the Second Optional protocol of ICCPR on the abolition of the death penalty and the International Convention on the Protection of the Rights of All Migrant Workers and Members of their Families (see Annex 2)¹⁵⁵. Kazakhstan noted during the discussion of the UPR in 2014¹⁵⁶ that it has been moving towards gradual abolition; has declared a moratorium on the death penalty and has utilized life imprisonment as an alternative. The country participated in several reporting cycles. Its most recent review took place on 27-28 February 2019 when its second report to the Committee on Economic, Social and Cultural Rights was considered. Up to twenty NGOs (international and local) provided information. Kazakhstan has made the pledge to uphold the Beijing Platform for Action (1995), ratified the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW) (1998) and signed the Optional Protocol to CEDAW (2001). In 2018 the Government submitted its 5th periodic report to CEDAW.

In 2017, in compliance with its reporting obligations under the Convention, the Government submitted its first comprehensive report to the Committee on the Rights of Persons with Disabilities (CRPD/C/KAZ/1)¹⁵⁷. The UN Human Rights Committee's report (CCPR/C/KAZ/CO/2) on Kazakhstan's

¹⁵⁵ Convention on the Rights of the Child was the first international HR instrument that Kazakhstan ratified after gaining independence (1994).

¹⁵⁶ <https://www.ohchr.org/EN/HRBodies/UPR/Pages/KZindex.aspx>

¹⁵⁷ Report of the Special Rapporteur on the rights of persons with disabilities on her mission to Kazakhstan, 2018.

compliance with its obligations pursuant to the International Covenant on Civil and Political Rights (August 2016) noted concerns in relation to torture and ill-treatment, freedom of expression, the independence of the judiciary and fair trials¹⁵⁸.

In February 2018, Kazakhstan submitted its 5th periodic report to CEDAW to be heard in the 74th session in October 2019. Despite recognition of Kazakhstan's achievements in protecting the rights of women, children and the eradication of violence, the Committee has noted that further action is required with regard to: low quality of public services provided to victims of domestic violence; weak effectiveness of state measures to prevent domestic violence; lack of programs and information campaigns at the local and national level aimed at promoting harmonious relations in the family and preventing domestic violence; low level of preparedness of state bodies for the implementation of normative legal acts in the field of

Figure 7 Recommendations given to Kazakhstan by the UN Human Rights bodies

¹⁵⁸ Final Evaluation of the Partnership Framework for Development Kazakhstan 2016-2020, 2019.

preventing domestic violence; insufficient number of state shelters for rendering services to victims of domestic violence; limitation of the national legislation for the prevention of domestic violence; insufficient level of interaction of public organizations, NGOs and state bodies in identifying and responding to domestic violence and supporting the victims of this type of violence, including the lack of a regulatory framework. Women's sexual and reproductive health are still issues of concern. Child marriage, bride kidnapping, teenage and unwanted pregnancies, pressure to have many children, lack of access to contraceptives and lack of comprehensive sexual education to support informed choices, all hinder women's equality and rights protection.

In 2019 Kazakhstan submitted the comprehensive National Review on implementation of the Beijing Declaration and Platform for action which gives updates on key changes, progress and challenges experienced by Kazakhstan in enforcing economic, social, cultural, civil and political rights of women over the 2015–2019 reporting period. In 2016 Kazakhstan submitted the National Report on implementation of the Regional Implementation Strategy of the Madrid International Plan of Action on Ageing in the 2012-2016 period (for the third review and appraisal) outlining its policies and practical measures to addressing population ageing.¹⁵⁹

In terms of institutional capacity, the Institution for Commissioner for Human Rights (Ombudsman) was established in 2002. It currently has “B” status and is therefore not in full compliance with the principles relating to the status of national institutions for the promotion and protection of human rights (the Paris Principles).¹⁶⁰ The UPR Review has recommended Kazakhstan to bring the mechanism into line with the Paris Principles. The office of Ombudsman for Children's Rights was established in 2016. The mandate of the Ombudsman for Children's Rights is to ensure and protect children's rights and interests, as well as to restore their infringed rights and freedoms in cooperation with state and civil institutes. It has some degree of formal independence from the executive but its compliance with the Paris principles has yet to be achieved. The functions of the Ombudsman for Children's Rights are undertaken on a pro bono basis and does not have an office supporting its work, lacks dedicated funding and regional representation.¹⁶¹ The Committee on the Rights of the Child urged the Government to take immediate measures to explicitly prohibit corporal punishment in all its forms in the home, care institutions and day care facilities and ensure that those who violate the law are held accountable.¹⁶²

5.2. Other International Commitments

Kazakhstan is a party to the Stockholm, Rotterdam and Basel Conventions on the management of hazardous waste and chemicals. The country is in the process of modernizing its waste management system in order to move to sustainable production and consumption patterns. Since 2016, Kazakhstan has maintained the state register of industrial and consumer wastes within the Unified Information System for Environmental Protection. It has ratified the UN Framework Convention on Climate Change, the Kyoto Protocol, the Paris Agreement and the Sendai Framework for Disaster Risk Reduction. Kazakhstan is a member of 5 Multilateral Environmental Agreements: Convention on Long-Range Transboundary Air Pollution, Convention on Environmental Impact Assessment in Transboundary Context, Convention on the Protection and Use of Transboundary Watercourses and International Lakes, the Convention on the

¹⁶² Committee on the Rights of the Child Concluding observations on the fourth periodic report of Kazakhstan, October 30, 2015.

Transboundary Effects of Industrial Accidents and the Convention on Access to Information, Public Participation in Decision Making and Access to Justice in Environmental Matters.¹⁶³

Kazakhstan is committed to implementation of the Sendai Framework for Disaster Risk Reduction, regularly reporting against Sendai Framework targets. However, to fully implement the Sendai Framework for Disaster Risk Reduction, Kazakhstan should establish a National Platform for DRR and adopt at the national level the strategy for DRR along with the other commitments under this framework.

Under the Paris Agreement, Kazakhstan pledged an unconditional 15% reduction in GHG emissions by 31 December 2030 compared to the base year and a conditional 25% reduction in GHG emissions by 31 December 2030 compared to the base year, subject to additional international investments, access to a low carbon technologies transfer mechanism, green climate funds and flexible mechanisms for a country with an economy in transition¹⁶⁴. According to a paper by Nazarbayev University, the target of a 25% GHG emissions reduction pathway appears ambitious compared with current energy policies and mitigation actions. Such a reduction requires an almost full phase-out of coal consumption in power generation by 2050. The share of renewable energy (including hydro) could represent half of the electricity generation mix, the other half being attributed to gas-fired power plants. A coal ban alone is not sufficient to reduce GHGs, additional actions are needed to promote renewables¹⁶⁵. Climate Action Tracker, a watchdog, asserts that “while Kazakhstan recognises the need to transition into a greener future, currently implemented policies are not yet sufficient to meet its targets and would lead to emissions of 324 MtCO₂e by 2020 (a reduction of 11% compared to 1990 levels) and 362 MtCO₂e by 2030 (an increase of 3% reduction below 1990 levels). The current policy landscape prioritizes energy sector emissions, which is feasible given that energy-related activities account for 85% of the country’s annual GHG emissions.”¹⁶⁶ At a Ministerial Roundtable in 2018, Kazakhstan committed to restore 1.5 million hectares of degraded and deforested land by 2030 under the Bonn Challenge and an additional 300,000 hectares subject to funding support.¹⁶⁷

Kazakhstan is a State Party to several Conventions in the field of Culture: Protection of Cultural Property in the Event of Armed Conflict (1954); Fighting against the illicit trafficking of cultural property (1970); Protection of the World Cultural and Natural Heritage (1972); Safeguarding of the Intangible Cultural Heritage (2003). There are 5 sites included in UNESCO’s World Heritage List and 10 elements in the Representative List of Intangible Cultural Heritage of Humanity. However, the awareness about the responsibility and capacities to implement the 1972 and 2003 Conventions remains limited. This is testified to by concerns expressed by the World Heritage Committee as regards the World Heritage properties in Kazakhstan.

6. Cross-boundary, Regional and Subregional Perspectives

6.1 Regional Challenges and Opportunities

Water. Cross-boundary and regional challenges of Kazakhstan (including ongoing issues with Aral Sea) are well-documented. One of the biggest challenges of the whole region of Central Asia is the issue of

¹⁶³ <https://www.unece.org/environmental-policy/conventions/envtreatieswelcome/about.html>

¹⁶⁴ Intended Nationally Determined Contributions, Kazakhstan

¹⁶⁵ <https://research.nu.edu.kz/en/publications/long-term-climate-change-mitigation-in-kazakhstan-in-a-post-paris>

¹⁶⁷ http://www.unece.org/fileadmin/DAM/timber/meetings/2018/20180621/Astana_Roundtable_Summary_Report_ENG.pdf

water management. In addition to ‘traditional’ on-going trans-boundary water management issues, climate change is expected to impact the availability of water resources, including the increased frequency and intensity of floods and droughts, heightened water scarcity, intensified erosion and sedimentation, reduced glacier, permafrost and snow cover, poorer water quality and degraded ecosystems¹⁶⁸.

Kazakhstan has been very active in international cooperation on water issues in the past decade. It remained a “stability factor” in the regional cooperation among Central Asian countries in the framework of the International Fund for saving the Aral Sea (IFAS) and took an active role in activities under the Convention on the Protection and Use of Transboundary Watercourses and International Lakes (Water Convention). Landmark achievements include the conclusion of two new bilateral agreements with the Russian Federation (2010 and 2016) and a new bilateral agreement on water quality with China (2011)¹⁶⁹. Specific arrangements exist for the Chu and Talas River Basins, and for the Amu Darya and Syr Darya River Basins¹⁷⁰; and bilateral agreements on the other basins have been entered into with China and Russia¹⁷¹. Kazakhstan reports that none of its 15 transboundary aquifers are covered by an operational arrangement¹⁷².

Trade. Given its location, Kazakhstan could be a significant transit country. Currently, this potential is not fully exploited. In 2018, it took 50 minutes on average for transit customs clearance¹⁷³. At present, Chinese transit through Kazakhstan is small, since the bulk of imports from China to the European Union follow the southern sea route. Calculations show that only 1% of cargo from China to Europe uses the land route (about USD 7bn out of a total of some USD 697bn)¹⁷⁴. This is likely to change soon - Kazakhstan is the critical pillar in two of the proposed six economic corridors under the China-led Belt and Road Initiative, namely the New Eurasian Land Bridge, connecting China and Europe via Central Asia, and the China-Central Asia-West Asia Corridor. The initiatives foresee investments up to USD 40bn until 2020 in logistics, public services, SMEs and other infrastructure. Kazakhstan hopes to promote the dry land port of Khorgos located 350 km north-east of Almaty as a transit hub for freight traffic flowing between China and Europe¹⁷⁵. Kazakhstan is also according priority treatment to reducing the cost of trade as a pre-requisite for achieving economic diversification.¹⁷⁶ The focus has been on modernizing customs clearance and border control procedures in fulfilment of the country’s commitments under the World Trade Organization Agreement on Trade Facilitation.¹⁷⁷ The Government is also developing the national quality control and quality assurance system (standards, technical

¹⁷⁶ Removing Regulatory and Procedural Barriers to Trade in Kazakhstan, UNECE and the International Trade Centre (2014)

¹⁷⁷ Kazakhstan ratified the agreement on 26 May 2016. As of August 2019, Kazakhstan has implemented 44.5% of its commitments under the Agreement (<https://www.tfadatabase.org/members/kazakhstan>)

regulations, conformity assessment, accreditation and metrology) so as to enable enterprises to attain and prove compliance with health, safety and environmental protection requirements in domestic and international markets.¹⁷⁸ According to the World Bank Doing Business Report, Kazakhstan improved from 123rd to 102nd place in international trading after introducing the ASTANA-1 IS electronic customs declaration system and reducing customs administrative fees, making trade across borders easier¹⁷⁹.

By 2021 Kazakhstan plans to build and reconstruct 5,703 km of roads of republican significance and 1,124 km of roads of regional and district significance, and to increase to 48% the share of category I and II highways. In addition, it is planned to build 1,302 km of railroad, electrify 522 km of railway lines and modernize 6,925 km of the upper track structure, which will further increase the importance of Kazakhstan's railways in the region¹⁸⁰. In 2016, railway transport comprised 46 percent of total freight turnover representing 33 percent of overall transport revenue. Kazakhstan's economy is expected to benefit from the increasing Asia-Europe overland transport. Coupled with its own initiative Nurly Zhol¹⁸¹, China's One Belt One Road initiative could contribute between 0.7 to 1 percent annually to its GDP creating 200,000 jobs and investment of more than USD 7 billion annually¹⁸². Its railway network comprises of 15,530 kms of track out of which 4,217 km is electrified and 4,900 km is double track. There are 16 border crossing stations, 11 of them are with the Russian Federation, two with China, and one with Kyrgyzstan, Turkmenistan and Uzbekistan. Three major international corridors run through Kazakhstan. One of which is north south is also called the Kazakhstan, Turkmenistan, and Islamic Republic of Iran or KTI corridor.

Kazakhstan is a party to the Framework Agreement on Facilitation of Cross-Border Paperless Trade in Asia and the Pacific, a United Nations treaty developed by more than 25 countries at very different stages of development. A recent ESCAP study finds that, if Kazakhstan implements WTO TFA together with cross-border paperless trade measures, it could achieve trade cost reductions of 30%, instead of only about 10% if it aims at basic compliance with the TFA.¹⁸³ This amounts to potential trade transaction cost savings of more than USD 0.5 billion per year.

6.2. National Participation in Subregional, Regional and Global Mechanisms

Kazakhstan is a founding member of the Commonwealth of Independent States (CIS), which formed after the dissolution of the USSR in 1991. In fact, the founding protocols of the CIS were signed in Kazakhstan and are known as the Alma-Ata protocols¹⁸⁴. Kazakhstan is also a member of OSCE, which it chaired in 2010. Kazakhstan's election as a non-permanent member of the UN Security Council for

¹⁸⁴ https://en.wikipedia.org/wiki/Alma-Ata_Protocol

2017-2018 bolstered its image as a responsible regional and global player. As a member of the CIS, Kazakhstan is a founding member of the Collective Security Treaty Organization (CSTO). Since 2001, Kazakhstan, together with China, Russia, Kyrgyzstan, Tajikistan and Uzbekistan, became a founding member of the Shanghai Cooperation Organization.

Kazakhstan is a member of the CIS Free Trade Agreement since 2012 and a member of the WTO since 2015. In addition, the treaty to create the Eurasian Economic Union was signed between Belarus, Kazakhstan and Russia in 2014 (Kyrgyzstan and Armenia also joined subsequently), effectively creating a single market for 183 million people. Nevertheless, of the partners of the Eurasian Economic Union only Russia is among the biggest trading partners – in 2017 Russia was the fourth biggest partner in terms of exports and the biggest in terms of imports¹⁸⁵. Kazakhstan is part of the Incheon Strategy to “Make the Right Real” for persons with disabilities and the Regional Roadmap for the Implementation of the 2030 Agenda in Asia and the Pacific. Kazakhstan participates in the United Nations Special Program for the Economies of Central Asia (SPECA) aimed at strengthening subregional cooperation in Central Asia and its integration into the world economy. It addresses subregional cooperation in such areas as water, energy, environment, sustainable transport, transit and connectivity, trade, statistics, knowledge-based development and gender.¹⁸⁶

6.3. South-South Cooperation and ODA

Kazakhstan has been using its location and weight in the region to encourage cooperation on a number of pressing issues. For example, it supported the Almaty Process on Refugee Protection and International migration, which promotes sustained dialogue and exchange of information on migration issues and on refugee protection challenges in Central Asia and the wider region. Seven countries of the region are current members.¹⁸⁷ Another initiative, implemented together with Kyrgyzstan and Afghanistan, is the establishment of the Center for Emergency Situations and Disaster Risk Reduction.¹⁸⁸ Kazakhstan is also an active member of the Vienna Programme of Action, centered upon addressing the challenges faced by landlocked countries, and aims to contribute to the eradication of poverty stemming from their landlockedness¹⁸⁹.

In 2013, Kazakhstan together with 40 other countries, founded the Astana Civil Service Hub. The mission of the Hub is to assist in promoting civil service effectiveness by supporting the efforts of governments of countries of the region and beyond in building institutional and human capacity¹⁹⁰. This Hub has been an important avenue for Kazakhstan both to learn from other countries and to share its own experience in a) partnerships and networking; b) capacity building and peer-to-peer learning and c) research and knowledge management. The Hub is viewed by participating countries as an effective platform to create triangular and South-South Partnerships and it can play an effective role to assist member states in reaching their SDG commitments. The Government of Kazakhstan has recently

provided the UN agencies based in Almaty a large and modern building to operate in, with a vision that the UN could strengthen its effort to promote SDGs at the regional level and beyond.

Kazakhstan started to work on ODA issues with the approval of the ‘Foreign Policy Concept of the Republic of Kazakhstan for 2014-2020’. In December 2014 a Law on Official Development Assistance was approved¹⁹¹, outlining the objectives, principles, competencies as well as sectoral priorities of Kazakhstan’s ODA. The Ministry of Foreign Affairs is the designated authority to implement Kazakhstan’s official development assistance (ODA) policy and the draft decree on establishment of KazAID was published in 2018. The total amount of assistance provided by Kazakhstan through bilateral and multilateral channels, including humanitarian aid, was \$49.4 million (including ODA \$42.9 million) in 2015, \$38 million (including ODA \$30.83 million) in 2016 and \$43.3 million (including ODA \$35.23 million) in 2017. In 2017, net ODA provided by Kazakhstan was USD 35.2 million¹⁹². 67% of gross ODA was provided bilaterally, of which 81% was channelled through multilateral organizations (multi-bi/non-core contributions primarily through the United Nations). In general, over the period 1996–2017, Kazakhstan allocated about \$485.23 million for objectives similar to ODA.¹⁹³ Kazakhstan allocated 33% of total ODA as core contributions to multilateral organizations.¹⁹⁴ Bilateral assistance was provided to Afghanistan (infrastructure, humanitarian aid and gender equality, scholarships for students), Tajikistan (humanitarian aid) and Ukraine.¹⁹⁵ The main sectors for Kazakhstan’s bilateral development cooperation were humanitarian aid, governance and civil society, and education.¹⁹⁶

7. Risk Mapping

The risk factors are adapted from the “UN Common Country Analysis Companion Paper to the United Nations Sustainable Development Cooperation Framework Guidance” and assessed in terms of their impact on SDG implementation. Likelihood of change is also assessed (see Annex 3).

8. Gaps and Challenges

8.1 Gaps in Data

Kazakhstan approved 297 indicators for monitoring¹⁹⁷. The website of the Committee of Statistics¹⁹⁸ lists a total of 244 indicators. Out of these - 149 indicators included data up to 2018 and in many cases the data was disaggregated by gender, age as well as by region. The tables include information on the source of data, agency responsible for the compilation of the data and agency responsible for policy implementation. The remaining 95 indicators (39%) did not include any data. None of the data tables

¹⁹⁸ [http://old.stat.gov.kz/faces/wcnav_externalId/R_SDG_goals-3?_afLoop=15883260972372669#%40%3F_adf.ctrl-state%3D15fyvgnxhc_69_\(1_August,_2019\)](http://old.stat.gov.kz/faces/wcnav_externalId/R_SDG_goals-3?_afLoop=15883260972372669#%40%3F_adf.ctrl-state%3D15fyvgnxhc_69_(1_August,_2019))

included values for the years of 2020, 2025 or 2030. It is interesting to compare the data from the Committee of Statistics with the dashboard prepared by UNESCAP (see Annex 4).

Comparison of data availability demonstrates the difficulties in obtaining reasonable and reliable data and shows that sometimes national and international information are not in sync. This is an important consideration for the future of monitoring of SDGs (see table in Annex 5). The first column of the table (yes/green) shows that there are 24 indicators for which data is available and UNESCAP assesses them as green, or on track to achieve target. These targets are presumably global, as Kazakhstan has not set its national targets yet (see section 3.1). The second column (yes/yellow) shows 37 indicators for which data is available and UNESCAP assesses them as yellow, or in need to accelerate progress to achieve target. The third column (yes/red) shows that there are 23 indicators for which data is available and UNESCAP assesses them as red or having a reverse trend for achieving the target. There are quite a few indicators, for which there is no data at the Committee of Statistics, but UNESCAP assessment is available, presumably because data is available from line ministries as well as from the regional and local levels. 13 such indicators are assessed as green; 15 indicators are assessed as yellow and 5 indicators are assessed as red.

In addition, there are 74 indicators for which the Committee of Statistics does have data, but UNESCAP does not, 4 indicators for which the Committee of Statistics does have data but are not included in UNESCAP dashboard and finally there 50 indicators for which neither the Committee of Statistics nor

Box 3. Data on the Most Vulnerable

- The official statistics report continuous reduction of the numbers of out of school children, but the data on the numbers of neglected, abused and runaway children aged 3-18 years placed in Centers for the Adaptation of Minors (CAM) present a serious problem requiring cross-sectoral solutions. The numbers of children placed in CAM was growing from 6,356 in 2014 to 6,953 in 2018 which can be an indicator of improved CAM's capacities to timely identify and support vulnerable children. It can be argued that many children did not attend school or attended it only part time before placement into CAMs.
- Kazakhstan has a robust administrative data collection system and collects figures on the number of persons with disabilities, but demographic data on persons with disabilities is lacking. The Government did not disaggregate data on the basis of disability in the 2009 national population census.
- There is no data on women involved in unpaid domestic work to develop informed social protection policies in the field of pensions, employment opportunities etc.
- According to UNESCO, the State Party has no available data to measure SDG Target 8.9 by 2030, devise and implement policies to promote sustainable tourism that creates jobs and promotes local culture and products; SDG 11.4 Strengthen efforts to protect and safeguard the world's cultural and natural heritage. For example, there is no data available regarding SDG 4.7 regarding education for sustainable development and global citizenship education; Most of SDG 4 indicators are partly monitored from only 'access' perspective and limited data on the 'quality' part. Moreover, non-formal and adult education is not monitored and regulated, there is almost no data and limited policies.

Source: A Situation Analysis of Children's Rights in Kazakhstan, UNICEF (2019); Report of the Special Rapporteur on the rights of persons with disabilities on her mission to Kazakhstan, 2018

UNESCAP have data. Kazakhstan plans to conduct a census in 2020, which could become a good opportunity to collect some of the missing data.

The gaps in national data persist for some of the most vulnerable groups (see Box 3). The data relevant to children's rights in Kazakhstan is relatively extensive - the statistical data covering such diverse areas as enrolment in education and graduation rates, mortality and morbidity, poverty rates, children in contact and conflict with law is available in various publications and resources produced by the Committee of Statistics, Ministry of National Economy. Some child-relevant statistical indicators disaggregated by sex, age, and geographical territory are available as well.¹⁹⁹ Kazakhstan also has a fairly developed system of information management in its health sector. Its network covers a whole healthcare system, but there are some capacity and reporting issues that limit its ability to provide accurate information. Digitalization of personal records will most likely improve the quality and accuracy of data. The data collected is not comprehensive and not systematically used however to measure, compare, and improve performance of the health services.²⁰⁰ Kazakhstan collects data regarding disaster impacts and losses (indicators related to the Sendai Framework for DRR and SDGs), but gaps remain in terms of systematic reporting of events caused by different types of hazards, as well as the impact of extensive and slow-onset events. The availability of disaggregated data focusing on vulnerable groups is also a challenge.

In Kazakhstan, effective developmental programming in cities is curtailed by the paucity of reliable and meaningful urban and city level data. Several guided steps to enhance urban data collection and evidence compilation will require that as part of the implementation, the country sets up urban monitoring committees or observatories; undertakes a review and selects relevant targets that matter most to the city monitoring agenda in the country; refines and agrees on methodologies and definitions that fit the local context from the menu of the many available global sets of indicators and; identifies sources of information and collects the baseline urban data.

At the same time, Kazakhstan has made important progress in the collection and dissemination of sex-disaggregated statistics and is the only country in Central Asia to have a specialized division managing gender statistics and indicators. Despite this achievement, the gender equality strategy highlights that reliable sex-disaggregated data remains insufficient to fully monitor progress on gender equality across all sectors. The sharing of gender-sensitive information and data is not well coordinated among government agencies, and not all data is made available to the public²⁰¹.

8.2 Financing

Kazakhstan is an upper middle-income country. 79.9% of SDGs are incorporated in national strategies and programs²⁰², largely financed from public resources. Kazakhstan's budget for 2019-2021 assumes GDP growth of 3.9 in 2019, 4.1 in 2020 and 4.3 in 2021. Table 6 shows that about a third of government revenues will be coming from oil and oil revenues cover a large amount of the budget deficit, although budgets are still planned with some deficit. With its flat economic growth, Kazakhstan might struggle to increase expenditures on human capital (which include social assistance, healthcare, education, culture and sport) beyond the declared 7.4% of GDP.

| Indicator | 2018 | 2019 | 2020 | 2021 |
|--|-------------|-------------|-------------|-------------|
| GDP volume (billion. KZTs) | 58 493,1 | 64 145,7 | 69 079,6 | 74 497,9 |
| Real GDP growth (%) | 3.8 | 3.9 | 4.1 | 4.3 |
| Revenues % to GDP (oil revenues) | 15,3 (6.0) | 15,2 (5.4) | 14,6 (4.8) | 14,1 (4.1) |
| Deficit in % of GDP (non-oil deficit) | -1.5 (-7.6) | -1.5 (-6.9) | -1.4 (-6.3) | -1.3 (-5.3) |
| Expenditure on Human Capital Development in % of GDP | 7.4 | 7.4 | 7.5 | 7.4 |

Source: *minfin.gov.kz*

The national debt of Kazakhstan stands at 40.7 bn USD as of July 2019, according to the Ministry of Finance (including 14.3 bn USD external debt). This is about 26% of GDP – considered a manageable level. Various taxes from the oil sector go to the National Fund – as of 1 August 2019 the stock of its funds stood at 26,062,038,092 thousand KZT.²⁰³

In terms of international development cooperation, Kazakhstan receives a rather modest amount - a net total of 64 million USD from various donors in 2016 and 59 million in 2017. Being an ‘emerging donor’, the country itself provided ODA worth around 35.2 million USD in 2017.²⁰⁴ Most of the development financing to Kazakhstan comes in the form of loans from large IFIs, such as the ADB, EBRD, World Bank and others. According to the World Bank, foreign direct investments in Kazakhstan constituted 2.9% of GDP in 2017 and 0.1% in 2018, a sharp drop from 12.5% of GDP in 2016.²⁰⁵

Kazakhstan would benefit from the Development Finance Assessment (DFA), conducted by the UNDP, to identify opportunities to mobilize additional sources of finance and use existing financial resources more efficiently to achieve the SDGs. This assessment would entail strengthening the link between planning and finance policy functions; supporting multi-stakeholder dialogue on financing; identifying solutions for mobilizing resources and effectively managing financing for results.

8.3 Capacity Analysis

To ensure consistency in the implementation of the 2030 Agenda, the Coordination Board on Sustainable Development Goals, chaired by the Deputy Prime Minister, was established. The Ministry of National Economy is the coordinating body of the Board. The JSC Economic Research Institute, which provides expert and analytical support, serves as the Secretariat (Figure 9).

The Board develops proposals for the creation of a unified policy for achieving the SDGs, coordinates the activities of inter-agency working groups, and prepares the Voluntary National Review. To ensure the effective organization of the Board's activities, five working groups have been established in five key areas of the 2030 Agenda, one of which, the “Partnership” working group (WG) is particularly responsible

for issues related to the implementation of the SDGs, including global partnership issues, resource mobilization, capacity building and trade.

Figure 9 Architecture of the Coordination Process for the Implementation of SDGs in Kazakhstan

Source: Voluntary National Review, Kazakhstan (2019)

As mentioned above, one of the central functions in the SDG architecture is assigned to the Economic Research Institute (ERI), which is mandated to prepare technical and organizational support to the Coordination Board and the WGs. In 2018 the UNDP conducted a special assessment report of its capacities and found the following areas needed improvement:

1) Lack in environmental capacity. The ERI has a dominant capacity in the economic field. When it comes to capacity in the environmental area, none of its existing units handle questions that support the integration of environmental priorities embedded in the 2030 Agenda. To avoid a silo-based implementation of the SDGs, it is of critical importance that the ERI has the capacity, authority and legal mandate to provide inter-institutional coordination to foster the mainstreaming of environmental and climate change targets into other sectors. In view of the need to integrate the environmental dimension and responding to the MAPS recommendation to put Kazakhstan on a green growth path, expertise is needed that can ensure the environmental dimension is strengthened. In addition to installing a Focal Point that supports the WG Planet, it is strongly advised to mobilize an international expert that can support the ERI's Centre for Sustainable Development in generating a balanced integration of the environmental dimension of the 2030 Agenda.

2) No focal point on LNOB. The newly implemented Centre for Sustainable Development includes a 'Focal Point on People', which should support integrating the principle of 'leaving no one behind' in the SDG implementation efforts. In addition, the ERI includes a 'Centre for Social and Demographic Development Research' that can support the social dimension in terms of research and potentially carry out the assessment of who is being left behind.

3) To strengthen gender mainstreaming. It is important that the suggested 'Centre for Sustainable Development' has the capacity to play a catalytic role in mainstreaming gender by holding government entities to account for achieving gender equality commitments embedded in the 2030 Agenda.

Annex 1 List of Acronyms and Abbreviations

| Acronym/ Abbreviation | Definition |
|--------------------------|--|
| AHS | African horse sickness |
| CEDAW | Committee on the Elimination of Discrimination against Women |

Annex 3 Risk Mapping

| # | Risk Factors | Brief Description | Impact | Likelihood |
|---|--|---|--------|------------|
| 1 | Political stability | After the managed leadership transition in 2019 (see 1.1), the political system in Kazakhstan appears to be stable. There are no discernible outside threats to the country. However, social tensions are brewing and come to the surface with some regularity. | High | Low |
| 2 | Democratic space/Civil society voice and participation | At the moment, the authorities appear to have heard the demands for creating more space for civil society (e.g. creation of the Council of Public Trust). However, it is too early to say whether this will lead to substantive reforms. | Medium | Medium |
| 3 | Internal security | At the moment, there are no issues of internal security in the country. The Global Counter-Terrorism Index ranks Kazakhstan in a lower risk category for terrorism (2.23), with an average of 1.21 risk from 2002-2017. In May 2019, 231 people were repatriated from Syria and the Government is closely monitoring their reintegration ²⁰⁶ . | High | Low |
| 4 | Justice and rule of law | Although justice reform has been announced, courts appear to be weak and security services have a certain degree of impunity, especially when dealing with 'extremist' suspects ²⁰⁷ . | High | Low |
| 5 | Economic stability | Kazakhstan's economy continues to depend on fossil fuels. Economic growth will be stable, although the lack of economic diversification presents challenges. Low level of growth does have an impact on the fiscal space for social spending. | High | Medium |
| 6 | Infrastructure and access to social services | Access to social services and utilities tends to be uneven in Kazakhstan. Regional inequality is pronounced and needs to be tackled. | Medium | Medium |
| 7 | Displacement and migration | Large-scale displacement of the population is not expected. At the same time, Kazakhstan has become a destination country for migrants from neighbouring CA countries. A severe economic downturn in these countries might increase the number of migrants, with negative economic and social consequences. | High | Medium |
| 8 | Public health | Recent epidemiologic review and projections (2018 and 2019) show a continuous increase of HIV, especially among MSM and transgender groups. There has been a 35% change in new | Medium | Medium |

²⁰⁶ <https://eurasianet.org/kazakhstan-evacuates-citizens-from-syria-arrests-some>

²⁰⁷ See <https://www.ohchr.org/EN/NewsEvents/Pages/DisplayNews.aspx?NewsID=24637&LangID=E>

| | | | | |
|----|---|---|--------|--------|
| | | HIV infections since 2010 and incidence: the prevalence ratio stands at 10%, putting Kazakhstan among global countries with the most rapidly evolving HIV infections. ²⁰⁸ The high burden of multiple-drug resistant tuberculosis (MDR-TB) and the spread of non-communicable diseases (NCDs) is also taking a toll socially and economically. Kazakhstan is among the top 10 countries for adolescent suicide, indicating a lack of skills to overcome depression and mental problems. ²⁰⁹ | | |
| 9 | Food security, food safety, agriculture and land | Kazakhstan remains the important supplier of grains, oilseeds and legumes in the region, but agriculture is prone to low productivity. There is considerable land degradation and risks related to veterinary and phytosanitary safety. | Medium | Medium |
| 10 | Environment and climate | Kazakhstan is one of the biggest emitters of CO2 and, at the same time, needs to adapt to climate change, especially with regards to agriculture. | High | Medium |
| 11 | Disaster risks | Kazakhstan is prone to such natural hazards as earthquakes, floods, mudflows, drought, extreme temperatures and avalanches. | Medium | Medium |
| 12 | Social cohesion, gender equality and non-discrimination | Despite a Gini coefficient of 27.5, social cohesion in the county shows signs of strain. Regional inequality is high, gender inequality is noticeable in terms of wages, labor force participation, unpaid domestic work, employment and economic opportunities, domestic violence, amongst other issues. There are big groups of population at a risk of being left behind (see section 4). | High | Medium |
| 13 | Regional and global influences | Kazakhstan is the richest country in the Central Asia region and the biggest by territory. Regional challenges related to water management are likely to continue, despite the recent rapprochement between Central Asian states. Kazakhstan intends to continue its activities in ODA, aiding neighboring countries and supporting regional initiatives. | Medium | Medium |
